

baebies[®] SEEKER[™]

Introducing an Innovative Newborn Screening Platform

FDA Authorized and CE Marked

When it comes to some congenital diseases, **days matter.**

Earlier detection and disease referral can lead to earlier treatment and can dramatically impact the outcome for a baby.

everyone **deserves a healthy start**

Leverage the Power

SEEKER

is a high throughput laboratory solution that quantitatively measures the activity of lysosomal storage enzymes from newborn dried blood spot specimens.

Reduced activity of these enzymes may be indicative of:

MPS I • Pompe • Gaucher • Fabry

Reliable and Accurate

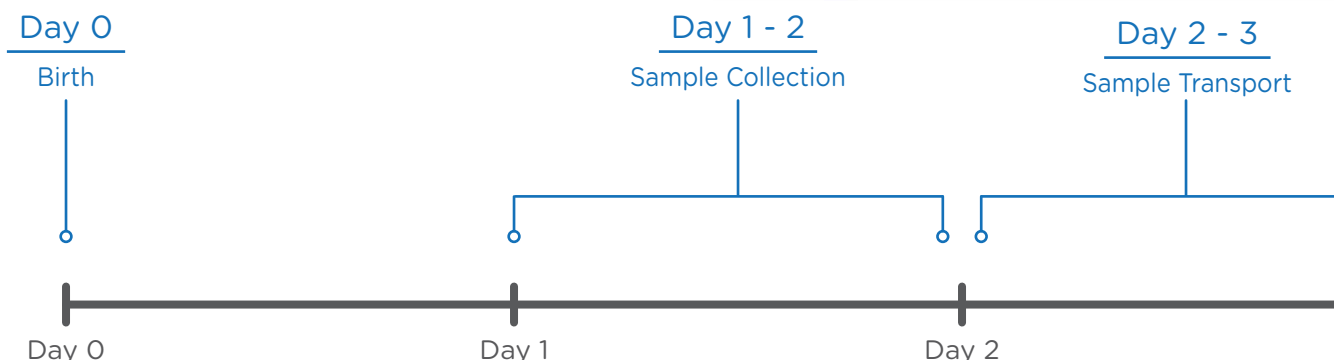

- Clinical study of over 150,000 subjects, with no reported false negatives
- Use of FDA regulated device reduces the CLIA validation burden and shortens the timeline to go live
- All electronic workstation so your lab is always up and running - no down time

Cost Effective

- Installs easily into your lab
- No renovations needed - just plug it in
- No daily platform maintenance or maintenance contracts

Incredibly Fast

- Screening results in under 3 hours
- Up to 960 samples per day on 2 SEEKER workstations
- Time from punch to referral in as little as one day... **days matter**

of Digital Microfluidics to Save Time and Money

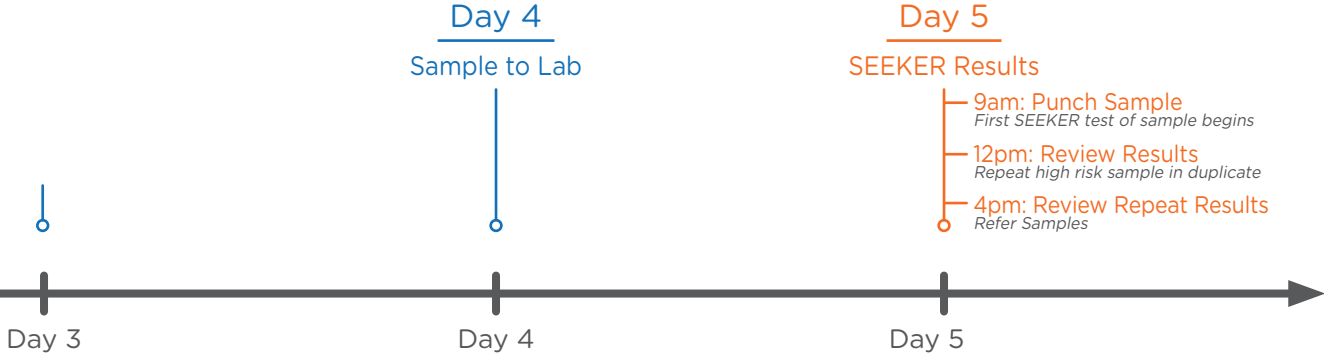

Everything your lab needs for LSD screening in one small workstation:

- 1 Instruments
- 2 Software & Desktop PC
- 3 Consumables
